

5K RUN/WALK 2021

What is PWS?

PWS is the leading cause of genetic life-threatening childhood obesity, and there is no cure. A rare genetic disorder, it occurs randomly in approximately one out of every 15,000 births. While the symptoms of PWS are varied and dramatic, the most notable symptom is extreme and unrelenting hunger coupled with a cruel, slow metabolism and low muscle tone. Because of the insatiable hunger, PWS is a life-threatening medical disorder.
